WHAT IS CLAIMED IS:

1. A collapsible container comprises:

a base member;

an end wall pivotably attached to the base member by a hinge mechanism for allowing the end wall to pivotably move between a folded position and an upright position, the end wall having lateral edges with latch members formed therein; and

a pair of opposed side walls each pivotably attached to the base member by a hinge mechanism for allowing the side walls to pivotably move between a folded position and an upright position, wherein each of the side walls includes an upper surface which is substantially beveled along its length, and a rear flanged portion having a latch receiver formed therein for receiving a respective latch member and for securing the container in an assembled position.
